

DSCAML1 :: ESRRG

Interchromosomal structural variant · chr1:216833625 to chr11:117581568 (GRCh38)

DNA ONLY · NO TRANSCRIBED PRODUCT ESTABLISHED

DNA

DETECTED

106 split reads across the prioritized DNA catalog; seen in four samples.

SHORT-READ RNA

NOT DETECTED

Zero RNA split reads in the prioritized fusion catalog.

SHORT-READ + ASSEMBLY

NOT ASSESSED

No RNA junction exists to assemble into a transcript haplotype.

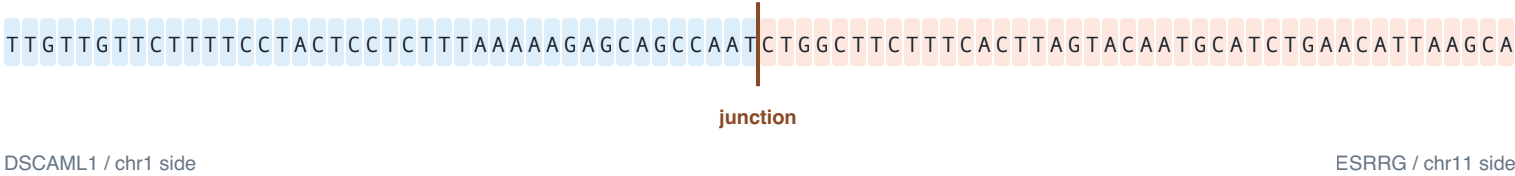

LONG-READ RNA

NOT DETECTED

No matching CTAT-LR-Fusion call in the osteosarc catalog.

1 · OBSERVED OR INFERRED JUNCTION SEQUENCE

DSCAML1 / chr1 to ESRRG / chr11

2 · PROTEIN-LEVEL INTERPRETATION

PROTEIN WITHHELD

No RNA-supported transcript junction; genomic breakends alone do not define a spliced coding frame.

SCIENTIFIC INTERPRETATION

DNA establishes a somatic rearrangement, but not expression, transcript structure, or a fusion protein.
