

TPST1 :: CRCP · T1

Intrachromosomal expressed rearrangement · chr7:66205522 to chr7:66127704 (GRCh38)

CROSS-PLATFORM · SHORT AND LONG RNA AGREE ON THE JUNCTION

DNA

DETECTED

PASS duplication pair; 14 variant fragments in the matched T1 DNA record.

SHORT-READ RNA

DETECTED

Isofox reports 3 junction fragments in T1 short-read RNA.

SHORT-READ + ASSEMBLY

UNRESOLVED

A junction is resolved, but the source does not provide a phased full-length coding transcript.

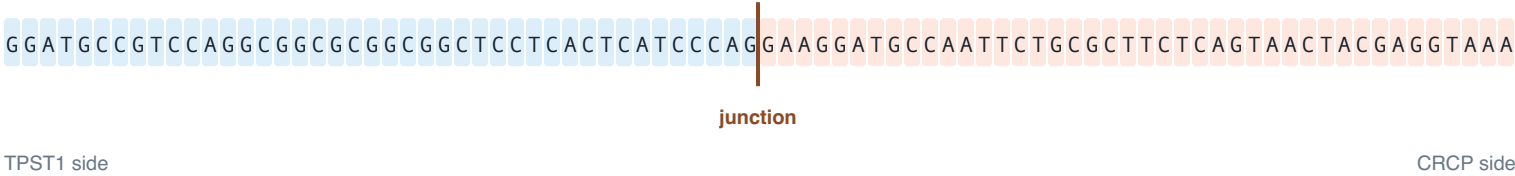

LONG-READ RNA

DETECTED

CTAT-LR-Fusion reports 27 ONT reads spanning the same splice junction.

1 · OBSERVED OR INFERRED JUNCTION SEQUENCE

TPST1 to CRCP

2 · PROTEIN-LEVEL INTERPRETATION

PROTEIN WITHHELD

The source establishes a splice junction, not a transcript-resolved CDS or validated fusion ORF.

SCIENTIFIC INTERPRETATION

Short and long reads corroborate expression; neither caller output alone establishes the fusion reading frame.
